

Cross Belt Magnets

One of the most reliable ways to remove unwanted ferrous metals.

Cross Belt Magnets separate automatically ferrous pieces mixed with non-magnetic materials that are moved by a conveyor belt, by a vibrant feeder, by slides and so on.

Whether your product is gravity fed through pipes and chutes, loosely transported on conveyors and/or pumped through pipelines, Moley Magnets has the magnetic separation solution.

Materials such as nails, rust, scale, bolts, welding rods and other contaminants are no match for Moley Magnets Separators.

serie SE2
model

serie SE4
model

- Easy Maintenance
- Operates under heavy-duty and continuous use.
- Heavy-duty Drive Packages Available
- Mounted externally on existing structures, avoid changes to the plants.
